## *Metal Qualities and Types*

Because "24 Karat" of pure gold is a very soft metal, it is "alloyed" (mixed) with other metals for strength:

**14 Karat Gold** is an alloy of 59% pure gold with a base metal for strength. It provides the highest quality and most durable finish.

**10 Karat Gold** is an alloy of 42% pure gold with a base metal for strength.

**Double Gold-Filled** is a layer of 10 Karat gold bonded to both front and back (where initials and year are engraved) of a reinforcing metal core.

**Gold-Filled** is a layer of 10 Karat gold bonded to the front of a reinforcing metal.

**Gold Electroplate** is a yellow gold electrolytically deposited onto a reinforcing metal. With this process, the thickness of gold is significantly less than gold-filled, and its durability is limited.

## *Full Lifetime Warranty*

Even the finest materials and workmanship will from time to time demand additional warranty attention.

Therefore, any jewelry having defects will be repaired or replaced as necessary without charge.

Questions concerning the warranty can be answered by calling toll-free 800-224-1657. This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.
